Deliver Windows on Mac Across Your Entire Workforce

You can deliver access to business-critical applications on every Mac across your user base. Tap into Microsoft Office, Microsoft Edge, QuickBooks and hundreds of other essential solutions for everyday business needs. Parallels is ideal for any professional environment—from education to financial services, technology, consulting and medical.

Mass Deployment

Deploy Windows with the same configuration across your entire population, quickly and effortlessly. Optional "Single Application" deployment mode enables Mac users to run a Windows application without an obvious delineation between the Mac OS and Parallels Desktop running as a virtual machine.

License Management

Use a single license for all installations or enroll new users via email without cumbersome key entry. Parallels Desktop Business Edition will automatically activate on end users' Mac computers. Administrators have the ability to see, deploy, deactivate and even blacklist licenses based on the Mac computer host name, username and serial number.

Security and Data Protection

Encrypt virtual machines' data, enforce external devices policies, restrict users from changing Parallels Desktop and VM settings, or create expiring VMs that lock once expired. It's never been easier to retain complete control of your data.

Fast, Powerful and Easy

" *Compared with competing products, Parallels Desktop is user-friendly, integrated into macOS in a better way, and easier to configure.* "

— *Jakob Tewes, Head of Technical Infrastructure Department, MaibornWolff*
