

Parallels RAS for Government IT

A secure and flexible VDI solution that improves workforce mobility

“Parallels RAS is a perfect alternative to complex and expensive VDI solutions because it is easy to configure, simple to use, and ensures business continuity while maintaining security for our employees.”

– Massimiliano Varutti, Information Systems, Digitalization and e-Government Service
of the Autonomous Region of Friuli Venezia Giulia in Italy

ENHANCED DATA SECURITY

Reduce the risk of data security breaches with multifactor authentication (MFA), encryption and advanced access filtering. Have complete visibility and granular control over all end-user data sharing activities from a central location, along with monitoring and reporting capabilities.

REMOTE ACCESS ON THE GO

Parallels RAS enables instant, secure, easy-to-use access to government applications on smartphones, tablets and web browsers—from anywhere. Switch between devices in the office, constituent’s neighborhoods or home.

CENTRALIZED IT MANAGEMENT

Reduce complexity and costs by centralizing IT operations such as deploying new users, applications, security patches and upgrades. IT can instantly deliver virtual workspaces to government employees in any location.

CONSTANT ACCESS

Government IT infrastructures need failover and high availability for uninterrupted access. With that in mind, Parallels RAS provides continuous application and desktop access in case of a datacenter failure and power loss.

Parallels RAS has won **The Govies Government Security Award** for “Application Security” multiple times.
